the treatment, prevention and diagnosis of medical conditions caused by Pacnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory presence or absence of P. acnes vilgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention of and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to therefore treat P. acnes infections. The antibodies may also be used a diagnostic agents for determining P. acnes proteins may also be used as diagnostic agents for determining P. acnes presence, for example, by this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         68 KGELAMRNIEARGLKOMKRQGDANVKGE-EGIVKAHLLIGVHDDIVSMEYDLAYKLGDLH 126

The invention relates to an isolated polymucleotide (Archests). Acres 47.33) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasse expression vectors and host cells comprising a diditionally encompasses expression vectors and host cells comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide for stimulating an immune response specific for a P. acnes polypeptides of the invention; a method for stimulating an immune response specific for a P. acnes polypeptides, and a mithodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the development of P. acnes in a parient; and a method for inhibiting the development of P. acnes in a parient; and a method for inhibiting the development of P. acnes in correcting. The P. acnes polypeptides, polymucleotides, attibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for adaposing, preventing or treating acne correcting. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes polymucleotides can also be used as probes or primers for a sequence represents a polypeptide prame) contained within the P. acnes polymucleotides of the canding trame) contained within the P. acnes polymucleotides of the canding frame) contained within the P. acnes polymucleotides of the cinvention. Note: The sequence data for this patent did not form the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ο,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               230 DATLVEVNPMÍKTGDGRÍLAÍDGKVÍVDNNASFROPDHÁ-----GLVDRATTDPLELR 282

AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts calls which express the colypeptides. The polypeptides (II) (and/or nucleic acids) may then be polypeptides my also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the cativity and therefore identify compounds that may be used for the colympostides my also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the control of S. epidermidis infections, e.g. endocarditis AAH53971 to treatment of S. epidermidis infections, e.g. endocarditis AAH53971 to compound the present invention DNA AAH5509 represent specifically claims from the present invention of the present invention in the present invention of the present invention in the compound only the present invention in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present in the control of the present present though sequences are present in the control of the present and primers are present in the control of the present and primers are present in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present
                                                                                                                                                                                                                                                                                                                                                                                                        c acids encoding polypeptides from Staphylococcus epidermidis, for vaccinating against infections, e.g. endocarditis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                      AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and lave antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. c. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their cativity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, eg. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA copyneare sequences from the present invention. AAH55091 to AAH55090 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polynucleotide sequences and primers which are used in the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     73 MRNIE-ARGL-KOMKROGDANVKGE-EGIVKAHL---LIGV-----HDDIVSMEYDLAY 120

Antisense; prokaryotic essential gene; cell proliferation; drug design.

Protein encoded by Prokaryotic essential gene #28675.

```
the invention tradeces given in the call couplibring any one of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated propagated or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway considered for proliferation, or that inhibits proliferation or the biological identifying a gene product or that has an activity against a biological pathway in which a proliferation required for cellular proliferation of an identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene or organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene or to which each of the strains is present in a culture or collection of the strains or strains; or (3) identifying the target of a compound that inhibits the culture or collection of conditional proteins or screening for homologus nucleic acids are useful for an dentifying proteins or screening for homologus mucleic acids required for cellular promerance or proliferation of an organism. The antisense candidate are useful for cellular provery processed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | : | : | : | : | | | DTLHTRVIGQNDAVNSISTAVRARAGLK----DP------KRPIGSFIFLGPTG 548

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to sorteen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABB130511), expressed DNA sequences (ABL16176) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye paratrachoma, and inclusion conjunctivitis; genttal diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, operinepathits, bartholhinitis, penumopathy in breast feeding infants; and veneraal lymphogramulomatosis. The polypeptides of the invention may be of use in treating these diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5883 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detectmine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that its prevented or treated may be meningitis. Nucleic stid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.

The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          73 MRNIEARGLKQMKRQGDANVKGEEGIVKAH----LLIGVHDDIVSME--YDLAYKLGDL- 125

This invention describes novel human nucleic acid (CDNA) sequences (A), that are highly expressed in uterine tumour tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (1) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAYS941-Y60328 represent protein fragments encoded by the human endometrium tumour cDNA library derived EST fragments represented in AAZ41981-Z42121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acid sequences expressed in uterine cancer tissues, and ved polypeptides, for treatment of uterine and endometrial cancer and

The present invention is related to a Lactococcus lactis mucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent w0200177334 (published 18-07T-2001) which is available in electronic format directly from WIPO at the business of the production of standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          454

The invention relates to the gene cluster encoding the polypeptides responsible for the biosynthesis of the polyene antibiotic amphotericin responsible for the biosynthesis of the polyene antibiotic amphotericin setul for preparing amphotericin derivatives or analogue antibiotic amphotericins with altered properties and in the biosynthesis of polykeides other than amphotericin ampholil, ampholil or ampholi mutants are useful for producing amphotericin derivatives glycosylated with alternative cugars, ampholil or ampholi or ampholi or ampholi or ampholi or ampholi amphotericin-lambic cronside B; ampholil or ampholi ampholic ampholic ampholic ampholic ampholic ampholic ampholic ampholic or ampholi  or ampholic and ampholic and ampholic and ampholic and ampholic and ampholic and ampholic or an originate of the preparing polypeptides capable of addition of mycosamine to a polyketide other than amphoteronolide A or B or for preparing polypeptides for in vitro synthesis of GDP-mycosamine. The present sequence is polyketide synthase multienzyme housing extension modules 9, 10, 11, 12, 13 and 14 encoded by 8. nodosus amphil gene

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium bacteria are useful for producing amino acids, nucleic acids, vitemins, saccharides and organic acids, particularly 1-1ysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to mucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an enthodo of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the polynucleotide and/or activity of the polynucleotide and/or polypeptide; and for conting sequences corresponding to the cDNA sequences of the invention (ADC32627) and the polypeptides encoded by the contigs (ADC32628)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

                                                                                                                                                                                                                  disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       160 HIGKTIEKLQKEMADIVEASRTSTLELQNQLDEYKEKNRRE--LAEMQRQLKEKTLEABK 217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     80 -GLKQMKRQGDANVKGE------EGIVKAHLLIGVHDDIVSMEYDLAYKLGDLHPT 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -ADC33394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           79

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide, or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway to proliferation or that has an activity against a biological pathway in which a proliferation or the test compound that inhibits expoliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene required for required gene or its gene product lies organism acts; (9) manufacturing an antibiotic; (10) profiling a gene required for underexpressed, it (10) profiling the expect proliferation of an organism; or (13) identifying the target of a compound that inhibits the compound, sactivity; (11) a culture comprising strains in which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits and discovery programs, or for screening honologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, X. preumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VAAGMNPM------DLKRGIDKAVIAAVEE---LKKLSVPCSDSKAIAQVGTISANSDS 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  72 AMRNIEARGLKOMKROGDANVKGEEGIVKAHLLIGVHDD---IVSMEYDLAY----- 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid derived from Enterococcus factium encoding an Enterococcus factium polypeptide having none of 10 fully defined sequences given in the (or comprising 40 sequential nuclectides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids is useful for diagnosing pathological conditions. The nucleic acids is useful for diagnosing pathological conditions. The nucleic acids is useful for diagnosing pathological conditions infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection, and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans nucleic acid is useful for recombinant production of Candida albicans and vaccines conteaining the nucleic acid are useful for preventing or treating Enterococcus faccium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             66 ESLNDTIENTLAAFDSNPAVKSYFSNDPAQHME------QLQQQLRTIQK 108

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polypeptides comprising an immunogenic part of a Leishmania antigen. The Leishmania polypeptides and their associated DNA sequences, epitopes and tusion proteins are used in the production of compositions used for inducing a protective immune response against leishmaniasis, for prevention and treatment of the disease. The compositions can also be used generally to treat diseases that respond to interleukin-15 stimulation. In addition, the products may contain an immunostimulant. Sequences AAU71805-AAU71862 represent Leishmania antigens and antigenic peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Leishmania antigens, useful for prevention, treatment and diagnosis of leishmaniasis, also related nucleic acids for genetic

The compositions and methods of the present invention are useful for preventing, treating and detecting invention are useful for preventing, treating and detecting leishmaniasis, and stimulating immune responses in patients against leishmaniasis. The polypeptides and the polymucleotides encoding them can be used for gene therapy, in vaccines or as interleukin-12 agonists. The compositions and methods of the present invention, as compared to prior art, are more improved therapeutic modalities in the diagnosis,

The invention relates to an isolated polypeptide comprising an immunogenic portion of a Leishmania antigen or its. Also included are antigenic epitopes, fusion proteins comprising an isolated polypeptide fusion protein comprising at least two contiguous antigenic epitopes, polynucleotides encoding the antigens or fusion proteins, a recombinant expression vector comprising the polynucleotide, a host cell transformed with the vector and a composition (pharmaceutical or immunogenic) comprising the antigen or fusion protein and a physiologically acceptable carrier. The compositions are useful for inducing protective immunity

against leishmaniasis in a patient. The fusion protein is useful for the detecting Leishmania infection in a patient by contacting dermal calls of the patient with the composition and detecting an immune response on the patient's skin, where the immune response is induration. The compositions are useful for stimulating a cellular and/or humoral immune response in a patient, or for treating a cellular and/or humoral immune response in a interleukin (IL)-2 stimulation, where the disease responsive to interleukin (IL) as bacterial, viral or profozoan infection. The antigen is useful for preventing or treating leishmaniasis. The present sequence represents a Leishmania antigen (or fragment).
                                                                                                                                                                                                                                                                                                                                       10;

New nucleotide sequence useful in the identification or Lactococcus lactis and related species. Claim 6; SEQ ID NO 507; 2504pp; French.

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, catteopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antianaemic, antianaemic, antianaemic, antianaemic, antipsoriatic and heparotropic activity. The polymucleotides of the invention can be used for gene therapy, of protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing, treating or preventing cell proliferative disorders (e.g. cancers including adenocarcinoma, lumphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's cliefactive disorders (e.g. cancers including adenocarcinoma, lumphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's syndromes, inflammation, osteoporosis, thrombocycopaemia, psoriasis or hepatitis. ABUI1450-ABUI1845 represent the MDDT polymucleotides encoded by ABUI1450-ABUI1845, described in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         763

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and calls genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-ANU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                     Human, vaccination, gene therapy, nutritional supplement;
stem cell proliferation, haematopoiesis, nerve tissue regeneration;
immune suppression, immune stimulation; anti-inflammatory; leukaemia.
Novel human secreted protein #3339.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
DNE-1 to DNE-13 (ABPS9210-ABPS921) and their coding metabolishing the present of the sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME.

Dreventing disorders associated with aberrant expression of DME, particularly cell proliferative disorders (e.g. arteriosclerosis, cirrhosis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thrombocytopenia or cancer), developmental disorders (e.g. osteoporosis, thrombosis, diabetes), eye rardation), endocrine (e.g. osteoporosis, thrombosis, diabetes), eye cystic fibrosis), gastronitestinial disorders (e.g. gastroenteritis, diarrhoea), liver disorders (e.g. ADS, allergies, asthma, autoimmune/inflammatory disorders (e.g. ADS, allergies, asthma, autoimmune/inflammatory disorders (e.g. ADS, allergies, asthma, glammatory disorders (e.g. ADS, allergies, asthma, allergies, stymbone, contoinment thyroiditis, contact dermatitis, croh's disease, glomerulonephritis, Goodpasture's syndrome, multiple sclerosis, osteoarthritis, pancreatitis, Reiter's syndrome, rheumatoid arthritis, syndrome, uveitis, They are also useful in the assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The polynucleotides encoding DME are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (ABZ81301-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acid sequences of \overline{\mathrm{DMS}}. The polynucleotides encoding DME are useful for creating transgenic animals to model human disease
                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                         WO200279441-A2
                                                                                                                                                                                                                 Homo sapiens
                                                                                                                                                                                                                                                                   10-OCT-2002
```

This invention describes novel secreted proteins (SECP) which have antiarteriosclerotic, antiatherosclerotic, hepatotropic, cytostatic, antiarteriosclerotic, antiatherosclerotic, hepatotropic, cytostatic, antiathmator, antialleragic, antiathmatic, antiathmatic, antiathmatory, neuroprotective, antipathisociae, antipachiae, antipathisociae, vasotropic, antiarthritic, cardiant, hypotensive, anticonvulsant, nootropic, immunosuppressive, antipathisociae, anticonvulsant, cardivity. The polymucleotides and polypeptides of the invention can be used for diagnosing, treating or preventing cell proliferative disorder. e.g. arterioscelerosis, athrensolerosis, dirthosis, hepatitis, cancer, autoimmune/inflammatory disorderse.g. acquired immunodeficiency syndrome (AIDS), allergies, asthma, anaemia, diabetes mellitus, Crohn's disease, autoimmune/inflammatory disorder e.g. acquired immunodeficiency syndrome (AIDS), allergies, ulcerative colitis, psoriaeis, rheumatoria argina pectoris, precipated anticipated in the content of disease, myocardial infarction, angina pectoris, hypertension, Raymaud's disease, myocardial infarction, angina pectoris, contentolated disorders e.g. buleband and Becker muscular dystrophy.

Contention can also be used Crotuselell-Jakob disease, etc; and developmental disorders e.g. Duchenne and Becker muscular dystrophy, cataract, gonadal dysgenesis, Cuching's syndrome, etc. The products of the invention can also be used the animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in channel, carrier or affected individuals, and as hybridization probes for normal, carrier or affected individuals, and as hybridization probes for Jan BM, Elliott VS, Forsythe IJ;
He A, Honchell CD, Ison CH;
Ason PM, Sanjanwala MM;
Thangavelu K, Tran UK, Walia NK; Novel human secreted protein useful for treating, preventing or diagnosing cancer, hepatitis, psoriasis, asthma, diabetes mellitus, anemia, epilepsy, cataract, Alzheimer's disease. Claim 1; Page 313-314; 1103pp; English.

This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity esq. cancer, hypotension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABU65218 represent the NOVX polypeptides encoded by

AAH52104 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the collypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymorleotide sequences from the present invention. AAH55091 to AAH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polymucleotide sequences given in the capture olisting of the present invention, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given the present of the pres | : | | | | | | | | DYDRKDLEGRLKAR----EDLLLPIYHQVAVQFADFHDTPGRMLEKGVISDILEWKTAR 2363 2250 TINPLCIEMYADK-ESRGGVLEPEGTVEIKFRKKDLIKSMRIDPAYKKLMEQLGEPDLS 2308 ----THVISDIQDFVVAL 142 Staphylococcus epidermidis SR1 strain; infection; diagnosis; vaccination; Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to movel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepais in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     135

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        258 AQQY--HAHVITTDFNL----NKVCHVQGITALN-,----VNDLSEAIKPNVHQGDQLSIL 306

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This represents the Chlamydia pneumoniae lpdA protein. The lpdA protein can be expressed by standard recombinant methodology. The lpdA protein, polyuucleotide and antibodies specific to the protein and vaccines comprising the lpdA protein are useful for preventing or treating Chlamydia (C. trachomatis, C. psittaci, C. pneumonia or C. pecorum) infection. Vaccine vectors, and the lpdA protein are useful in the preparation of medicaments for preventing and/or treating Chlamydia infection. Primers and probes derived from the lpdA gene are also useful for detecting and/or identifying Chlamydia in the biological material. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61

The present invention describes compositions comprising a Chlamydia Capi protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immuno response, specifically stimulating a Chlamydia-specific. T-cell response or inhibiting the development of a Chlamydia infection in an presence of Chlamydia in patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; and for treatment of a Chlamydia in fection in an prisection. ABL92709 and ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                             Chlamydial infection, Chlamydia, vaccine, detection, diagnosis, antigen, antibacterial; immunostimulant, immune response,
Chlamydia-specific T-cell response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel compositions comprising Chlamydia Capl protein and its use in the treatment of Chlamydia infection.
                                                                          Chlamydia pneumoniae protein sequence SEQ ID NO:399.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Probst P, Bhatia A;

the foll antienness given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a proliferation of a cell. Also included are:

(2) a vector comprising a promoter operably linked to the nucleic acid

(2) a host cell containing the vector; (3) an isolated

conjugation or its fragment whose expression is inhibited by the antisense

continued or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding

continued or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding

continued or its fragment whose expression is inhibited by the proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for collular proliferation or the biological pathway required for cellular proliferation or the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibictic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent or organism acts; (9) manufacturing an antibictic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the culture confidentifying proteins or screening for homologous nucleic acids are useful for confident discussion or for screening confidence acids are useful for the confidence or collection of an organism. The antisense nucleic acids are useful for the confidence or collection of single confidence and determination of an organism. The antisense model or callection and confidence or collections or for some p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained it alectronic format directly from WIPO at the printed specification, but was obtained fitp who, int/pub/published_pct_sequences.                                                                                                                                                                                                                                                                                                                                                                                                                 thrombocytopaenia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undesirable immune response. N. B. Sequence not given in specification, but produced using the wild type hBPI sequence given in figure 3

                                                                                                                                                                                                     The present sequence is the recombinant endotoxin neutralising bolypeptide (RENP) B(GAT9) (NCY139), which comprises the human bactericidal/permeability increasing protein (hBFI) mutant Lys148Gly, Lys150Asp, Lys160Asn, Lys161Gln, Arg167Gln, Lys169Val, Lys17Met, Lys1818Asp, Lys180Glu. The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, rest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             77
                                                                           Lipo:polysaccharide binding and endotoxin neutralising polypeptide - useful in diagnosis, prevention and treatment of Gram-negative bacterial infection and associated disorders and conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20 VLVAIGTAVTAAVNPGVVVRISQKGEDYASQQGTAALQKE--LKRIKIPDYSDSFKIKHL

tragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammadamia mimmunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is also to solve the interpretation compounds that binds to a naturally processed class I or class II MRC-binding polypeptide. The polypeptides and polymentacions, concer, gastric cancer, adenocarcinoma, marcoma, melanoma, mymboma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, important the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GIVDFKGELAMRNIEAR------GLKQMKRQGDANVKGEEGIVKAHLLIGV 107

The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye paratrachoma, and inclusion conjunctivitis; genttal diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, operingatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              101 GDYVILHGKLTVYAPRGQYQIVAYALTFSGEGNL-----LQQFEERKQRLAAEGYFDPK 154

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide comprises one of the 5602 complementary strand of a polynuclectide which comprises one of the 5602 oligonuclectide comprises at least 15 nuclectides; or (b) a combination of an oligonuclectide comprises a sequence complementary to the comprises a sequence complementary to the sequence and an oligonuclectide comprising a sequence complementary to the polynuclectide comprises a 3'-end sequence of an oligonuclectide which comprises a 1'-end sequence of complementary to a polynuclectide which comprises a 1'-end sequence of sequence of sequence of sequence of sequence of 3'-end sequence of se
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 8; SEQ ID NO 14155; 2537pp + Sequence Listing; English.

Ota T, Is Ishii S,

The present invention describes primer sets for synthesising 5602 full
[1] In oligo-of primer and an oligonucleotide complementary to the

[2] Complementary strand of a polynucleotide which comprises one of the 5602

[3] Complementary strand of a polynucleotide which comprises one of the 5602

[3] Complementary strand of a polynucleotide which comprises a combination

[3] Complementary strand of a polynucleotide which comprises a 5'-end

[4] Complementary strand of a polynucleotide which comprises a 5'-end

[5] Sequence and an oligonucleotide comprising a sequence complementary to the

[5] Complementary strand of a polynucleotide which comprises a 5'-end

[5] Sequence and an oligonucleotide comprises a 3'-end sequence, where the complementary to a

[5] Sequence and an oligonucleotide comprises a 3'-end sequence, where the complementary to a

[6] Sequence and an oligonucleotide comprises a 1'-end sequence, where these the complementary to a

[6] Sequence and an oligonucleotide comprises a 1'-end sequence, where these complementary to a

[7] Sequence and an oligonucleotide comprises a 1'-end sequence, where the combination of

[7] Coligonucleotide comprises a 1'-end sequence, where these complementary to a

[8] Sequence and sequence are useful for synthesising polynucleotides,

[8] Coligonucleotide comprises of the abnormality of the proteins encoded by

[8] Coligonucleotides, all of which are used in the exemplification of the

[8] Coligonucleotides, all of which are used in the exemplification of the

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium and analysing a homologue of a gene derived from coryneform bacterium. Vitanis, saccharides and organic acids, nucleic acids, vitanins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GIVDFK-GELAMRN---IEARGL--KQMKRQGDANVKGEEGIVKAHL--LIGVHDDI--V 112

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIJ16176-ABIJ3011), expressed DNA sequences (ABID1840-ABIJ40175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     75 NIEBARGLKOMKROGDANVKGEEGIVKAHLLIGVHD--DIVSMEYDLAYKLGDLHPTTHVI 132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4057,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 22392 Application US/09252991A

Patent No. 6551792

GENUEAL INFORMATION:

GENUEAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190

US-08-461-722-2

Sequence 2, Application US/08461722

Patent No. 6335183

GENERAL INFORMATION:

APPLICANT: Young, Richard A. and Young, Douglas

TILE OF INVENTION: Stress Proteins and Uses Therefor

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS:

ADDRESSEE: Hamilton, Brock, Smith & Reynolds, P.C.

STREET: 2 Militia Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
